After the 2011 decennial review, there was one commission action that indicated that the institution should move quickly to adopt a more formal structure to support general education assessment. A progress report was submitted on April 1, 2013, and a full cycle of general education assessment has since been completed. Action plans have been implemented based on information learned through the assessment process, which will be discussed further in section five of the PRR. The internal recommendations of WCU’s 2011 self-study were:

- Assess the understanding and implementation of, effectiveness of, and accountability for distributed leadership across divisions. Following this investigation, develop a communication plan to make clear how distributed leadership can best function to serve our students and the University across all divisions.
- Refine the budgeting process in order to strengthen the link among planning, assessment, and resource allocation; provide greater flexibility for WCU to move resources across divisions; and address the accumulation of surplus rollover revenue in order to allocate to emerging needs.
- Create an institutional assessment structure with specific goals, measures, procedures, and outcomes for all units, as well as a mechanism for communicating results and subsequent actions based on assessment results. Assessment of student learning and student support services would be one component of this effectiveness assessment structure.
- Improve academic advising for all students.
- Ensure sufficient support for faculty scholarship and teaching.

Distributed Leadership Across Divisions

At WCU, distributed leadership is defined as a management model in which all faculty and staff are recognized as experts in their own right, with expectations and responsibilities to actively participate in tasks and initiatives across the institution which serve to support the mission of access and student success. Under distributed leadership, everyone is responsible and accountable for leadership within his or her area. Good ideas are generated across the University, and many people cooperate in creating change. Distributed leadership is intended to create an environment where everyone feels free to develop and share new ideas, recognizing that while they all embrace the same institutional mission, they contribute to it in different ways. The goal is to empower everyone to make their job more efficient, meaningful, and effective. While distributed leadership continues to be effective, it has been strengthened since the previous self-study as a result of the development and implementation of the 2013 strategic plan Building on Excellence. The plan ensures cohesion across the institution in pursuit of the University’s mission. Each of the five themes of the plan was developed to ensure accountability and communication across all divisions. Cabinet level administrators serve as Theme Team co-chairs along with a staff or faculty member: VP for Academic Affairs (Academics), Director of Social Equity (Diversity), VP for Advancement and Sponsored Research (Engagement), VP for Student Affairs (Enrichment), and VP for Finance and Administration (Sustainability). The co-chair approach enhances the campus visibility of the distributed leadership model, as Theme Team members are comprised of administration, faculty, staff, and students from across the
institution. These efforts have contributed to the continued success of the strategic plan, including implementation of plan actions as well as achieving plan goals.

The VPs, faculty, staff, and students communicate regularly in the development, monitoring, and evaluation of theme objectives and outcome actions. Additionally, outcome actions (which are assigned to individuals across campus to report on or demonstrate achievement of) have been vetted to ensure they have been operationalized in measurable ways. Each of these changes has helped strengthen communication across divisions because Theme Team leaders are not only considering their respective areas but the institution as a whole in the formation and completion of objectives. This is attributable to the fact that many objectives cut across the broad themes of the strategic plan, ensuring that team members consider all divisions in order to achieve strategic plan objectives.

Additionally, the operationalization of outcomes has made it much easier for progress to be demonstrated, which allows for more robust discussion of assessment outcomes and implementation of the next logical steps (closing the loop). This is a positive change when compared to past years in which the focus tended to be on narratives about process rather than measurable outcomes. The changes in the infrastructure for the plan as it pertains to membership and operationalization have provided more accountability for the distributed leadership model across the divisions by providing multiple points of measurement in relation to achieving objectives. In summary, the institution has identified and capitalized on potential synergies and found ways to reduce the duplication of effort in order to better serve the students and University constituency.

Refining the Budgeting Process

The most recent decennial self-study highlighted concerns about the University’s decentralized budget processes. The resulting refinement of WCU’s budget process focused on preserving flexibility and independence while acknowledging the need to redesign how funds are allocated. In fall 2014, an outside consultant was engaged to review the current budget process, share alternative models and recommend a budgeting process that provides greater transparency. Following this visit, a new university-wide committee -- the Budget Review Committee -- was formed to make the budgeting process more transparent. Currently, the following actions have occurred as a result of this process: the establishment of by-laws, committee structure, and a calendar of tasks, election and appointment of members, and tutorials to inform committee members about institutional finances, environment conditions, and historical funding patterns. An implementation plan was also developed to demonstrate how the new budget model will coincide with the timing of strategic plan decisions. The new structure for the budget process is more inclusive of the entire campus community, as the membership is comprised of faculty, staff, managers, and students. Significant responsibilities of this committee include sharing information and seeking input from the wider campus constituency on a regular basis. Further information about the budgeting process will be discussed in section six of this document.

Creating an Institutional Assessment Structure

After the last decennial report, the institution moved quickly to implement a structure for both institutional effectiveness and student learning assessment. The strategic plan Building on Excellence is the blueprint of the University’s ability to demonstrate institutional effectiveness and is currently in its third year of implementation. Compared to previous plans, there is more intentionality to
monitoring, reporting, and evaluating the plan’s activities and outcomes. Capitalizing on existing software already used on campus in the assessment of learning outcomes, the institution now has the ability to obtain reports that document how strategic plan objectives are met and how they align with the Middle States Commission on Higher Education standards. Additionally, reports are able to establish links between planning and budgeting for current and future resource requests related to the strategic plan. All of this information is shared with the University community via the strategic plan website, as well as campus-wide “Big Plan Days” held at the end of each semester. More specific information related to institutional effectiveness will be discussed in section five of this document.

The development of a more formalized assessment structure for student learning outcomes was initiated in fall 2012 out of the Provost’s office with oversight from the Faculty Associate for Teaching, Learning, and Assessment. While there were no recommendations resulting from the previous decennial report related to student learning assessment, upon reflection the institution felt more structure was necessary to better understand the state of student learning assessment across the institution. Over the past three years, all academic programs have been evaluated on the quality of their assessment plan through the institution’s Assurance of Student Learning (ASL) initiative. The ASL has allowed the institution to communicate to all academic and non-academic programs, regardless of discipline, what the core elements are with regard to ensuring high-quality academic programming and assessment of student learning outcomes. These core elements are evaluated using an institutional rubric, which includes:

- Program learning outcomes that are specific and direct
- Curriculum maps that indicate where outcomes are introduced, practiced, and assessed at the program level
- Use of both direct and indirect assessment measures
- Assessment measures inclusive of rationale for their use
- Criteria for success (i.e. benchmarking) for each assessment measure
- Appropriate reporting of results
- Action plans tied to the results

More specific information as it relates to assessment of student learning will be discussed in section five of this document.

Improving Academic Advising

A campus-wide advising task force was convened in fall 2014. This group was tasked with defining “excellent advising” and identifying ways the institution can best support faculty in meeting that standard of advising. The task force consulted with multiple stakeholders in the drafting of a definition and identifying institutional supports for advising. One of the initial outcomes of this group was the creation of an advising website. The website allows for clear communication across the institution relating to advising expectations (students and faculty); use of advising-related technology; and policies, procedures, and resources. The task force’s ongoing work includes incorporating advising training into both new student and new faculty orientation, examining long-term training and assessment solutions, and recommending possible changes to campus-wide advising structures. Included in these efforts are discussion of ways to create a system of measuring
and improving the quality of advising on campus. The strategic plan contains several objectives centered on advising that this group uses to guide their work.

Ensuring Sufficient Support for Faculty Scholarship and Teaching

In a significant step towards ensuring sufficient support for faculty scholarship and teaching, the Provost and Vice President for Academic Affairs has allotted each tenured and tenure-track faculty member $1,500 in professional development funding in each of the last three years. New tenure-track hires receive $6,000 to be used during their first two years of employment. This new base funding is meant to be used for, among other things, attendance at state, regional, and national conferences or the purchase of equipment that enhances scholarly development. Funds are allocated to the Deans to be distributed to their faculty and each respective department and Dean monitors spending of funds. Previously, faculty development funding was dependent upon the capacity of each individual college’s budget to provide resources, making for an uneven experience for faculty members since colleges often have varying abilities to produce excess discretionary funds for faculty development. Making this funding part of the base budget has allowed the University to make significant progress in addressing this recommendation.

At the same time, the division of Academic Affairs has begun to capture faculty scholarship and creativity through an annual report that is distributed in the fall of each year and allows faculty to report on scholarly and creative work that they publish and present on each year. This is an important step in creating linkages between the outcomes related to this strategic initiative and the budgeting processes and demonstrates that the investment of these dollars clearly support the goal of enhancing faculty’s scholarly development.

In addition to providing direct financial support, the Academic Affairs division provides technical assistance by providing release time for a faculty member to direct the Teaching, Learning, and Assessment Center (TLAC), which offers a wide variety of professional development opportunities as well as support for teaching and learning. Over the last several years the TLAC has been provided dedicated space on campus and under the direction of the faculty associate has served as the central point for all issues related to faculty development. The faculty associate has direct oversight of several University-wide committees that promote the professional development of faculty. These committees include New Faculty Orientation, Faculty Mentoring, the University Assessment Advisory Committee, and the Committee for Excellence in Learning and Teaching (CELT). The TLAC website has an array of resources and tips for faculty as it relates to professional development and has used both face-to-face and online technology to provide multiple professional development opportunities over the last several years. On a weekly basis, faculty who subscribe to a listserv receive a 20-minute webinar video on teaching, learning, and assessment-related topics in higher education. There are also a variety of workshops presented in coordination with the Office of Distance Education and other entities on campus throughout the academic year. In both January and May of each year, a daylong professional development workshop is held for the campus community on various topics related to pedagogy and assessment. In May of 2015, over 45 faculty members across campus attended a workshop on Lesson Study, and in January 2016, a workshop on forming meaningful partnerships between Academic and Student Affairs was held and attended by over 65
faculties and staff. Annually, over $10,000 in professional development funding is available for faculty projects, which are submitted as proposals reviewed and monitored by CELT.

The funding for library materials, especially online resources, has been consistently high. In statistics reported in 2015, West Chester University ranked third from the top in the amount of money spent for library materials per student in a comparison of 35 peer institutions reporting nationwide. In the past five years the total number of on-line resources has more than doubled to over 1.7 million books, journal titles, streaming audio albums, and video recordings.

Commission Response - Impact of the Doctor of Nursing Practice Program

The Doctor of Nursing Practice (DNP) was the first doctoral program offered at the institution. WCU’s DNP program goals and outcomes are congruent with the mission of PASSHE, WCU, the College of Health Sciences, and the Department of Nursing, which include developing applied graduate degrees, especially degrees that can be delivered online, and being responsive to regional needs in areas of employment with high demand. This program supports and strengthens the undergraduate and graduate nursing degrees offered in the Department of Nursing. The DNP program provides graduates with the additional competencies and knowledge needed to practice at the highest level.

The Higher Education Modernization Act signed into law by Governor Tom Corbett in summer 2012 allows all 14 PASSHE universities to offer applied or professional doctorates. WCU’s DNP program is congruent with PASSHE Strategic Initiatives which are grounded in the System’s mission, “to be among the nation’s leading systems of public universities, recognized for (1) access and affordability of excellent undergraduate and graduate education; and (2) responsiveness to state, regional, and national needs through quality academic programs, research, and service” (PASSHE Strategic Initiatives, October 13, 2010). PASSHE Initiative 1: Transforming Students and the Learning Environment speaks to “the physical spaces in which learning occurs and the means by which information and courses are delivered must adapt and be more flexible” (PASSHE Strategic Initiatives, October 13, 2010).

The request to deliver the DNP program stemmed from WCU’s mission to provide access and offer high-quality programs for its students and the citizens of southeastern Pennsylvania. The DNP curriculum is designed to provide these graduates with the additional competencies and knowledge needed to advance their practice to the highest level of nursing. The program enables WCU to expand community services, professional networks and collaborations with regional health care and educational entities in order to foster collaborative research, create entrepreneurial endeavors and create new revenue streams, a further reflection of the mission and goals of WCU in serving the regional needs of the surrounding community.

Like all academic programs at the institution, the DNP must have a student learning assessment plan on file within the planning and outcome assessment software platform (Nuventive’s TracDat). As described later in this document, academic programs are given flexibility in their choice of outcomes, measures, criteria, as well as the rotation for reviewing results and the development of action plans. However, as part of the ASL noted above, all programs must ensure the quality and consistency of their plan through their participation in the ASL process. The quality of each of the respective ASL
plans is measured using an institutional rubric (described earlier) designed to evaluate multiple aspects of assessment.

The Doctor of Nursing Practice assessment plan was developed using the *Essentials of Doctoral Education for Advanced Nursing Practice* published by American Association of Critical Care Nurses in 2006 as a framework. The document outlines eight foundational *Essentials* that must be present within programs conferring the Doctor of Nursing Practice degree. The *Essentials* serve as the goals for the program for which relevant learning outcomes can be mapped to those that are achieved throughout the curricula. All program learning outcomes, as a result of their alignment with the *Essentials*, demonstrate an appropriate level of rigor and sophistication that is expected of doctoral students. Following the development of student learning outcomes, the program chose measures (two for each outcome, one of which had to be a direct measure) to be used in the evaluation of the outcome. According to the AACN, faculty of DNP programs are allowed the academic freedom to create innovative and integrated curricula to meet the competencies outlined in the *Essentials* document so assessment measures are not dictated by a governing body per se. Over the last two years, outcomes data collected have documented the following strengths related to DNP student learning: *TO BE ADDED* Additionally this work has allowed the program to understand the following areas that need to be improved within the curricula in an effort for continuous improvement: *TO BE ADDED*
